

Step Up Your Reliability Program

With Predictive Solutions & Expert Monitoring Services

Which Situation Describes You?

- If you already have some type of monitoring program in place, you may be questioning whether the results are optimal—or even correct—and you could still be missing critical failures.
- Maybe you are outsourcing a portion of your asset base to a third party and wonder if they are catching all the early fault indicators.
- Perhaps you've yet to adopt a formal reliability strategy due to a combination of time, funding, or resource constraints. For many, just deciding where to go next can be a show-stopper.

Regardless of your situation, you are not alone. Experittec is ready to accept the challenge to maximize the return on your Predictive Maintenance and Reliability Program ...and the first step is on us!

Now is the Time to Experience Experittec

1

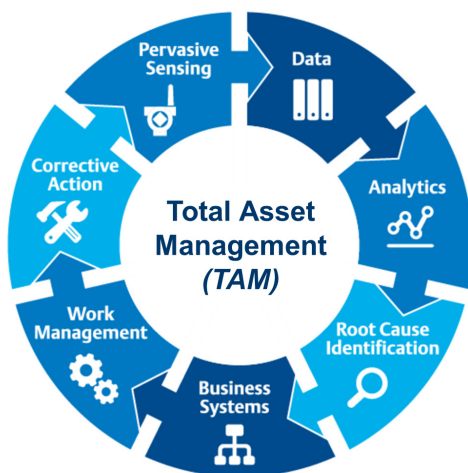

You pick the 5-10 most costly, problematic, or operationally important pieces of equipment in your facility.

2

An Experittec Certified Maintenance and Reliability Professional will come to your plant, on our dime, and conduct a full-scale assessment of those assets utilizing the latest PdM technology in advanced vibration spectrum and waveform analysis.

3

We provide a report of findings, potential root causes, and recommendations to increase your assets' reliability and operating lifespan. You and your team will be given a customized roadmap to implement a program and options to get started.

The numbers don't lie. A more reliable plant is also safer and more profitable. With over 5% of plant production on average sacrificed to unplanned downtime, and with over 50% of safety incidents occurring during transient and non-routine events from equipment failures, there is much to lose by NOT investing in your facility's reliability.

Need More Reasons?

Selecting the Right Assets Matters

7 asset classes account for 75% of your failures and over 3% of lost production. Too many facilities overspend on the wrong assets and underspend on those that matter. If you or your contractors are monitoring equipment health purely on a scheduled basis, the opportunity to miss the early signs of failures increases dramatically.

Improving Reliability Pays Off

No matter where your organization may be in its maintenance and reliability journey, the fact remains that reliability always pays big dividends. Companies that consistently outpace their peers have a dedicated focus on using reliability to increase production. When the primary objective is to maximize equipment efficiency, maintenance savings are just an added benefit.

Avoiding Failures is Good Business

Because lost production is likely the #1 erosion of your bottom line, reliability is your insurance policy that keeps paying an annual dividend in the form of ROI. In the most severe cases, a single incident of unplanned downtime could pay for a reliability investment multiple times over, and each additional preventable failure can fund future improvements.

If you are using another company's program and are not completely satisfied, this is a great opportunity to try Experitec. Regardless of where you are in your reliability journey, we have a program for you.

Experitec has served the industry for over 100 years, partnering with our customers to gain competitive advantages and unlock the hidden potential in their facilities. By optimizing operator and control performance, improving asset reliability, creating safer places to work, and helping clients reach their environmental and sustainability goals, Experitec is dedicated to achieving positive outcomes for the businesses we serve. Our unique long-term partnerships with Emerson and others enable us to connect customers with innovative technologies, subject matter expertise, and 24/7 lifecycle support and engineering services. As employee owners, the Experitec team is eager to partner with you on your next automation or reliability project in a positive, driven, and collaborative way. We have local offices in St. Louis, MO; Kansas City, MO; Memphis, TN; and Decatur, IL; as well as warehouse and service locations in the surrounding areas.
